## 1 Introduction

---

NVNMD stands for non-von Neumann molecular dynamics.

Any user can follow two consecutive steps to run molecular dynamics (MD) on the proposed NVNMD computer, which has been released online: (i) to train a machine learning (ML) model that can decently reproduce the potential energy surface (PES); and (ii) to deploy the trained ML model on the proposed NVNMD computer, then run MD there to obtain the atomistic trajectories.

## 2 Preparation

---

### 2-1 Downloading source code

---

First, please visit <https://github.com/LiuGroupHNU/nvnmd> to download training and testing code for NVNMD.

Or get the source code with git

```
cd /some/workspace
git clone https://github.com/LiuGroupHNU/nvnmd.git $nvnmd_root
cd $nvnmd_root
```

where `$nvnmd_root` is the name of the directory you wish to create on your machine.

Now we assume that `$nvnmd_source_dir` is the path to the current directory.

## 2-2 Installing

---

Check the compiler version on your machine by `gcc --version`

The C++ interface was tested with compiler `gcc >= 6.0.0`. However, `gcc == 9.0.0` is better for fixing compatibility bugs.

Check you have installed `conda` on your machine by `which conda && conda --version`

Then create a virtual environment and activate the environment to actually use it

```
conda create -n nvnmd
conda activate nvnmd
```

NVNMD can be installed by

```
bash install.sh
```

The install process consists of three steps:

1. check and install dependences, such as conda, gcc and python
2. install cmake-3.10.0
3. install tensorflow-2.7.0, libtensorflow\_cc.so
4. install the python dependences of NVNMD, and NVNMD

NVNMD can also be available with conda by

```
conda install nvnmd libnvnmd -c nvnmd -c conda-forge
```

If everything works fine, you can use not only NVNMD but also DeePMD-kit. If the intermediate process reports an error due to network timeout, please re-execute the above installation command.

## 3 Training

---

Our training procedure consists of not only the continuous neural network (CNN) training, but also the quantized neural network (QNN) training which uses the results of CNN as inputs. It is performed on CPU or GPU by using the training codes we open-sourced online.

To train a ML model that can decently reproduce the PES, training and testing data set should be prepared first. This can be done by using either the state-of-the-art active learning tools, or the outdated (i.e., less efficient) brute-force density functional theory (DFT)-based ab-initio molecular dynamics (AIMD) sampling.

Then, copy the data set to working directory

```
mkdir -p $workspace
cd $workspace
mkdir -p data
cp -r $dataset data
```

where `$dataset` is the path to the data set and `$workspace` is the path to working directory.  
`$nvnmd_root/examples/data` is the path to the data set used in this example.

### 3-1 Input script

---

Create and go to the training directory.

```
mkdir train
cd train
```

Then copy the input script `train.json` to the directory `train`

```
cp -r $nvnmd_root/examples/train/train.json train.json
```

The structure of the input script is as follows

```
{
  "nvnmd" : {},
  "learning_rate" : {},
  "loss" : {},
  "training": {}
}
```

### 3-1-1 nvnmd

The "nvnmd" section is defined as

```
{
  "net_size":32,
  "sel":[60, 60],
  "rcut":7.0,
  "rcut_smth":0.5
}
```

where items are defined as:

| Item      | Mean                        | Optional Value                                |
|-----------|-----------------------------|---|
| net_size  | the size of nueral network  | 32 or 128                                     |
| sel       | the number of neighbors     | integer list of lengths 1 to 4 are acceptable |
| rcut      | the cutoff radial           | (0, 8.0]                                      |
| rcut_smth | the smooth cutoff parameter | (0, 8.0]                                      |

### 3-1-2 learning\_rate

The "learning\_rate" section is defined as

```
{
  "type":"exp",
  "start_lr": 5e-3,
  "stop_lr": 5e-6,
  "decay_steps": 5000
}
```

where items are defined as:

| Item        | Mean   | Optional Value         |
|-------------|--|------------------------|
| type        | learning rate variant type                                       | exp                    |
| start_lr    | the learning rate at the beginning of the training               | a positive real number |
| stop_lr     | the desired learning rate at the end of the training             | a positive real number |
| decay_stops | the learning rate is decaying every {decay_stops} training steps | a positive integer     |

### 3-1-3 loss

The "loss" section is defined as

```
{
  "start_pref_e": 0.02,
  "limit_pref_e": 2,
  "start_pref_f": 1000,
  "limit_pref_f": 1,
  "start_pref_v": 0,
  "limit_pref_v": 0
}
```

where items are defined as:

| Item         | Mean   | Optional Value               |
|--------------|--|------------------------------|
| start_pref_e | the loss factor of energy at the beginning of the training | zero or positive real number |
| limit_pref_e | the loss factor of energy at the end of the training       | zero or positive real number |
| start_pref_f | the loss factor of force at the beginning of the training  | zero or positive real number |
| limit_pref_f | the loss factor of force at the end of the training        | zero or positive real number |
| start_pref_v | the loss factor of virial at the beginning of the training | zero or positive real number |
| limit_pref_v | the loss factor of virial at the end of the training       | zero or positive real number |

### 3-1-4 training

The "training" section is defined as

```
{
  "seed": 1,
  "stop_batch": 500000,
}
```

```

"numb_test": 10,
"disp_file": "lcurve.out",
"disp_freq": 100,
"save_ckpt": "model.ckpt",
"save_freq": 10000,
"training_data":{
  "systems":["system1_path", "system2_path", "..."],
  "set_prefix": "set",
  "batch_size": ["batch_size_of_system1", "batch_size_of_system2", "..."]
}
}

```

where items are defined as:

| Item       | Mean  | Optional Value     |
|------------|---|--------------------|
| seed       | the random seed                                     | a integer          |
| stop_batch | the total training steps                            | a positive integer |
| numb_test  | the accuracy is test by using {numb_test} sample    | a positive integer |
| disp_file  | the log file where the training message display     | a string           |
| disp_freq  | display frequency                                   | a positive integer |
| save_ckpt  | check point file                                    | a string           |
| save_freq  | save frequency                                      | a positive integer |
| systems    | a list of data directory which contains the dataset | string list        |
| set_prefix | the prefix of dataset                               | a string           |
| batch_size | a list of batch size of corresponding dataset       | a integer list     |

## 3-2 Training

training can be invoked by

```
dp train_nvnmdd train.json
```

After training process, you will get two folders: `nvnmdd_cnn` and `nvnmdd_qnn`. The `nvnmdd_cnn` contains the model after continuous neural network (CNN) training. The `nvnmdd_qnn` contains the model after quantized neural network (QNN) training. The binary file `nvnmdd_qnn/model.pb` is the model file which is used to performs NVNMD in server [<http://nvnmdd.picp.vip>]

## 3-3 Testing

The frozen model can be used in many ways. The most straightforward testing can be invoked by

```

mkdir test
dp test -m ./nvnmdd_qnn/frozen_model.pb -s path/to/system -d ./test/detail -n
99999 | tee test/output

```

where the frozen model file to import is given via the `-m` command line flag, the path to the testing data set is given via the `-s` command line flag, the file containing details of energy, force and virial accuracy is given via the `-d` command line flag, the amount of data for testing is given via the `-n` command line flag.

## 4 Running MD

After CNN and QNN training, you can upload the ML model to our online NVNMD system and run MD there.

### 4-1 Account application

The server website of NVNMD is available at <http://nvnmd.picp.vip>. You can visit the URL and enter the login interface (Figure.1).

NVNMD

[Switch to Chinese](#)

|          |                          |
|----------|--------------------------|
| Username | <input type="text"/>     |
| Password | <input type="password"/> |

To apply for an account, please email:  
[jie\\_liu@hnu.edu.cn](mailto:jie_liu@hnu.edu.cn), [liujie@uw.edu](mailto:liujie@uw.edu)

Figure.1 The login interface

To obtain an account, please send your application to the email ([jie\\_liu@hnu.edu.cn](mailto:jie_liu@hnu.edu.cn), [liujie@uw.edu](mailto:liujie@uw.edu)). The username and password will be sent to you by email.

### 4-2 Adding task

After successfully obtaining the account, enter the username and password in the login interface, and click "Login" to enter the homepage (Figure.2).

NVNMD

Current user: test1 [Logout](#)  
Remaining calculation time: 6:22:29

[Add a new task](#)  
[Operation records](#)

Calculation records [Refresh](#)  
[Clear calculation records](#)

| Submission time | Task name | Input script | Calculation status | Cancel calculation | Calculation time | Download results | Delect record |
|-----------------|-----------|--------------|--------------------|--------------------|------------------|------------------|---------------|
|-----------------|-----------|--------------|--------------------|--------------------|------------------|------------------|---------------|

Figure.2 The homepage

The homepage displays the remaining calculation time and all calculation records not deleted. Click [Add a new task](#) to enter the interface for adding a new task (Figure.3).

## NVNMD

Current user: test1 [Return to home page](#)  
Remaining calculation time: 6:22:29

|                          |   |
|--------------------------|---|
| Task name                | <input type="text" value="test"/>                     |
| Upload mode <sup>?</sup> | Manual upload <span>▼</span>                          |
| Input script             | <input type="button" value="Browse..."/> input.lammps |
| Model file               | <input type="button" value="Browse..."/> model.pb     |
| Data files               | <input type="button" value="Browse..."/> init.lmps    |

Figure.3 The interface for adding a new task

- Task name: name of the task
- Upload mode: two modes of uploading results to online data storage, including [Manual upload](#) and [Automatic upload](#). Results need to be uploaded manually to online data storage with [Manual upload](#) mode, and will be uploaded automatically with [Automatic upload](#) mode.
- Input script: input file of the MD simulation.

In the input script, one needs to specify the pair style as follows

```
pair_style nvnmd
pair_coeff
```

- Model file: the ML model named [model.pb](#) obtained by QNN training.
- Data files: data files containing information required for running an MD simulation (e.g., [coord.lmps](#) containing initial atom coordinates).

Next, you can click [Submit](#) to submit the task and then automatically return to the homepage (Figure.4).

## NVNMD

Current user: test1 [Logout](#)  
Remaining calculation time: 6:22:29  
[Add a new task](#)  
[Operation records](#)

Calculation records [Refresh](#)  
[Clear calculation records](#)

| Submission time     | Task name | Input script | Calculation status | Cancel calculation     | Calculation time | Download results | Delect record |
|---------------------|-----------|--------------|--------------------|------------------------|------------------|------------------|---------------|
| 2021-12-12 18:21:45 | test      | input.lammps | Pending            | <a href="#">Cancel</a> |                  |                  |               |

Figure.4 The homepage with a new record

Then, click **Refresh** to view the latest status of all calculation tasks.

## 4-3 Cancelling calculation

For the task whose calculation status is **Pending** and **Running**, you can click the corresponding **cancel** on the homepage to stop the calculation (Figure.5).

The screenshot shows the NVNMD homepage. At the top, it displays 'Current user:test1 Logout' and 'Remaining calculation time:6:22:29'. Below this are links for 'Add a new task' and 'Operation records'. Further down, there are links for 'Calculation records Refresh' and 'Clear calculation records'. The main content is a table with the following data:

| Submission time     | Task name | Input script | Calculation status | Cancel calculation | Calculation time | Download results          | Delect record |
|---------------------|-----------|--------------|--------------------|--------------------|------------------|---------------------------|---------------|
| 2021-12-12 18:21:45 | test      | input.lammps | Cancelled          | Cancel             | 0:00:00          | Package<br>Separate files | Delect        |

Figure.5 The homepage with a cancelled task

## 4-4 Downloading results

For the task whose calculation status is **Completed**, **Failed** and **Cancelled**, you can click the corresponding **Package** or **Separate files** in the **Download results** bar on the homepage to download results.

Click **Package** to download a zipped package of all files including input files and output results (Figure.6).

The screenshot shows the NVNMD interface for downloading results. It displays 'Current user:test1 Return to home page' and 'Remaining calculation time:6:22:29'. Below this is a table with the following data:

| Files      |          |                   |                                   |                                |
|------------|----------|-------------------|-----------------------------------|--------------------------------|
| Name       | Size     | Download directly | Download from online data storage | Upload to online data storage© |
| output.zip | 380.1 KB | Download          |                                   | Upload                         |

Figure.6 The interface for downloading a zipped package

Click **separate files** to download the required separate files (Figure.7).

Figure.7 The interface for downloading separate files

If **Manual upload** mode is selected or the file has expired, click **Upload** on the download interface to upload manually.

## 4-5 Deleting record

---

For the task no longer needed, you can click the corresponding **Delete** on the homepage to delete the record.

Records cannot be retrieved after deletion.

## 4-6 Clearing records

---

Click **Clear calculation records** on the homepage to clear all records.

Records cannot be retrieved after clearing.
